12. CAPITAL MANAGEMENT

The Corporation manages its capital to ensure sufficient financial flexibility to achieve ongoing business objectives, including funding future investment and growth opportunities and financial obligations, and maximizing shareholder returns.

The Corporation considers its capital employed to be bank debt, second lien debt, convertible debentures and shareholders' equity. The Corporation makes adjustments to capital employed by monitoring economic conditions and investment opportunities. The Corporation generally relies on credit facilities and cash flows from operations in excess of interest to fund capital requirements. To maintain or modify its capital structure, the Corporation may issue new common or preferred shares, issue new subordinated debt, renegotiate existing debt terms, or repay existing debt. The Corporation is not currently subject to any externally imposed capital requirements, other than covenants (note 6) on Tidewater Midstream's bank debt.

The Corporation also monitors its capital structure based on consolidated net debt to adjusted EBITDA. This metric measures the Corporation's financial leverage. Consolidated net debt is defined as bank debt, second lien debt and convertible debentures, less cash and cash equivalents.

13. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

a) Fair value of financial instruments

At September 30, 2025, the fair value of cash and cash equivalents, accounts receivable, accounts payable, accrued liabilities and provisions approximated their carrying value due to their short-term maturity. The carrying value of the outstanding bank debt and second lien debt approximated fair value due to the use of floating interest rates.

At September 30, 2025, the fair value of the Corporation's convertible debentures was \$83.4 million using quoted market prices on the TSX.

b) Credit risk

Credit risk is the risk of financial loss to the Corporation if a customer or counterparty to a financial instrument fails to meet its contractual obligations. Credit risk arises principally from the Corporation's accounts receivable, and from financial counterparties holding cash, cash equivalents and derivative contracts. Cash consists of amounts on deposit with Canadian chartered banks. The Corporation manages credit exposure of cash and cash equivalents by selecting financial institutions with high credit ratings.

The Corporation assesses lifetime expected credit losses for accounts receivable using historical default rates, aged accounts receivable analysis, and forward-looking information to determine the appropriate expected credit losses. At September 30, 2025, lifetime expected credit losses for accounts receivable outstanding were \$3.0 million (December 31, 2024 - \$3.0 million).

c) Liquidity risk

Liquidity risk is the risk that the Corporation will not be able to meet financial obligations at the point at which they are due. The Corporation manages its liquidity risk through ongoing capital management. Management's assessment of its liquidity reflects estimates, assumptions and judgements relating to current market conditions.

Tidewater Midstream

On September 30, 2025, the Corporation had negative working capital of \$136.7 million, due to \$177.1 million of bank debt being current. Cash flow provided by operating activities was \$29.5 million for the nine months ended September 30, 2025.

During 2025, Tidewater Midstream continues to experience weak energy commodity pricing in Western Canada, with lower margins on conventional diesel and gasoline, and low short term AECO prices leading to production shut-ins for natural gas. These conditions have had a negative impact on Tidewater Midstream's profitability and liquidity. Additionally, the oversupply of renewable diesel into the BC market has also decreased the demand and price for conventional diesel and BC LCFS Credits, which negatively impacts Tidewater Midstream.

On March 26, 2025, the financial covenants within the Tidewater Midstream Senior Credit Facility were revised (note 6) effective January 1, 2025 through March 31, 2026 to increase the deconsolidated first lien senior debt to adjusted EBITDA covenant to 4.50:1 and lower deconsolidated EBITDA to Interest Coverage Ratio to 1.50:1. On September 30, 2025, the Tidewater Midstream Senior Credit Facility was amended to waive the requirements to comply with the quarterly financial covenants until March 31, 2026, at which time the Corporation will be required to maintain certain deconsolidated financial covenants on a trailing twelve-month basis. These amendments will assist in providing financial flexibility as Tidewater Midstream navigates the market conditions stated above.

At September 30, 2025, the Tidewater Midstream Senior Credit Facility (note 6) had capacity of \$301.5 million, and was composed of a \$125.0 Syndicated Facility, a \$50.0 million Operating Facility, and a \$126.5 million Term Facility. The Syndicated Facility and the Operating Facility have a maturity date of September 12, 2026, and the Term Facility has a maturity date of August 30, 2027. There can be no assurances that the Syndicated Facility or the Operating Facility will be extended. In the event that the syndicated or operating facilities are not extended, alternative sources of funding will be necessary. Any refinancing may be at higher interest rates, less favorable terms, may require compliance with more onerous covenants, or result in dilution of Tidewater Midstream shareholders.

Management has reviewed the liquidity risk and considered the various initiatives and resources available to mitigate this risk. Tidewater Midstream believes that it has access to sufficient capital through its net cash provided by operating activities, proceeds from the sale of BC LCFS emission credits, proceeds from the sale of non-core assets, and other sources of financing to meet its obligations and financial commitments and provide sufficient funding for anticipated capital expenditures. Tidewater Midstream expects it will have sufficient liquidity to meet its obligations as they come due.

Tidewater Renewables

Tidewater Renewables anticipates that net cash from operating activities, funds from its Senior Credit Facility and second lien credit facility, proceeds from the sale of emissions credits, and other financing sources will be sufficient to fulfill its financial commitments, obligations, and anticipated capital expenditures as they become due.

Total financial liabilities	\$ 392.6	\$ 423.7	\$ 271.7	\$ 582.6

(2) Amounts represent undiscounted principal only and exclude accrued interest and transaction costs.

d) Market risk

Market risk is the risk that changes in market conditions, such as commodity prices, foreign exchange rates and interest rates, will affect the Corporation's cash flow, income, or the value of its financial instruments. The objective of the Corporation's market risk management program is to manage and control market risk exposures within acceptable parameters, while maximizing the Corporation's return.

Interest rate risk

Interest rate risk refers to the risk that the value of the financial instrument or cash flows associated with the financial instrument will fluctuate due to changes in market interest rates. The Corporation may use forward interest rate swaps to hedge the interest rate associated with interest payments occurring as a result of its bank debt.

At September 30, 2025, the Corporation had variable rate bank debt (note 6) totalling \$306.0 million. A 1% change in the interest rates on bank debt would have an after-tax impact on net loss of approximately \$0.6 million and \$1.7 million for the three and nine months ended September 30, 2025, respectively.

Foreign currency exchange rate risk

Foreign currency risk is the risk that the value of future cash flows will fluctuate as a result of changes in foreign currency exchange rates. The Corporation's foreign currency risk arises from certain working capital balances denominated in United States Dollars (USD). As at September 30, 2025, net working capital and derivative contract balances denominated in USD were \$2.4 million. A 5% change in foreign exchange rates between the USD and the Canadian Dollar would have an after-tax impact on net loss of approximately \$0.1 million for the nine months ended September 30, 2025.

Commodity price risk

Commodity price risk is the risk that the fair value of a commodity derivative will fluctuate because of changes in market prices. In the normal course of operations, the Corporation purchases and sells various commodities and uses derivatives to protect its revenue and operating costs from price fluctuations. The Corporation is subject to price risk through these derivative contract assets and liabilities. A 10% change in prices for the underlying commodities, related to the Corporation's derivative contracts, would have an after-tax impact on net loss of \$1.5 million for the nine months ended September 30, 2025.

Warrant liability risk

Tidewater Renewables' warrants are classified as a financial liability due to the cashless exercise feature. They are measured at their fair value upon issuance and at each subsequent reporting period. A 10% change in the Corporation's share price would have an after-tax impact on net loss of \$0.8 million for the nine months ended September 30, 2025.
